It was used by a small percentage of Mac users, most notably those that were interested in typesetting mathematics and programming, but it never quite reached its full potential, due to the lack of an updated user interface. As a result, I decided to rewrite the software in C++, so it wouldn't be tied to a specific user interface, and would just work and look good, regardless of what type of user interface was present. KeyMapper Pro was born out of this initial version, and I released version 1.0 in November of 2001. It was the first version of the software to use the C++ GUI framework that I had developed. After a lot of testing, I released version 1.1 in January of 2002. My primary goal for the next few months was to make sure that KeyMapper could be used with all OS's, from Windows 95 and up. I achieved this in December of 2002. At that time 2edc1e01e8
