

PHP Studio is a powerful and easy-to-use IDE for PHP developers. It is easy to use and require only a few minutes to get you started with the IDE. Start using PHP Studio immediately. You will find it easy to use and will be amazed by the variety of features you can use! It has already become the most popular IDE in Korea. So, don't miss the chance to start using it right now! PHP Studio will help you develop PHP scripts using integrated FTP, HTTP, and DB browser tool as well as a powerful PHP debugger for analyzing and testing PHP scripts. Built-in Xdebug enables you to work efficiently on complex systems. It automatically displays parameters and return values and even lets you edit variables in the xdebug. You can also easily view database structures and run a query on PHP Studio. PHP Studio provides an integrated FTP server, so that you can edit files in any location without the need to access the file via the web. PHP Studio also supports hook functions to allow you to override the built-in function while debugging. With PHP Studio's built-in HTTP server, you can connect to it from the Internet or from another location and debug your scripts. PHP Studio is designed to reduce the burden on memory. You can use the Web browser to analyze PHP scripts and run queries on a database without any memory trouble. PHP Studio provides an advanced and intuitive code explorer to let you easily navigate through PHP code rapidly and work with object references. PHP Studio provides a tabbed code explorer to help you browse through your PHP scripts. PHP Studio has an integrated text editor that allows you to edit PHP, HTML and CSS files directly. PHP Studio offers many convenient features for PHP, HTML and CSS development. You can use PHP Studio to develop Java applications or create PHP extensions. PHP Studio enables you to edit files from remote locations. PHP Studio is suitable for PHP developers with or without knowledge of Java. With PHP Studio, you can easily develop PHP scripts in a user-friendly environment, eliminating many of the complexities of using Microsoft® Visual Studio. Features include: - Built-in FTP, HTTP, and DB browser - Xdebug for debugging PHP scripts and debugging extension in PHP studio - Data source explorer for viewing data sources or databases with syntax coloring - Code explorer - Text editor with syntax coloring, automatic bracketing and cursor positioning - Easy-to-use, full

KEYMACRO is an advanced PHP editor. It integrates into PHP Server, is very easy to use and offers many different functions and features. KeyMacro supports multiple layouts, syntax coloring, auto indent, automatic indentation, line break, indent and unindent. KeyMacro can build all kinds of macro-keys, including: comment, string, function, print, echo, eval, http, php and many more. KeyMacro's functions are very efficient. You can use a powerful API to create all kinds of macros, such as tag, text, line, selection, etc. For example, you can use the selected text as a tag of the text, and then you can create a macro to handle such tag. With KeyMacro, you can define key names in the left panel, and then you can see the defined key names in the right panel. If you want to delete a key name, just drag and drop it to the trash bin. You can also create any tag macros, such as text, line, selection, comment, tag, url, block, etc. And you can assign different actions to different tags, including: append, delete, move, edit, etc. KeyMacro's excellent key combination layout is fully compatible with the Goto Definition and Goto Definition, and it has a large number of customizable key combination layouts, and you can use a key combination to quickly jump from one point to another in the code. KeyMacro is also very convenient to add keyboard shortcuts to any point of the code. You can open a pop-up dialog to show the editing operations that you want, and you can customize the dialog, such as keyboard shortcuts, key names, text size, etc. KeyMacro is very easy to use. It will show a brief tutorial of each function, and it will give you the most convenient help for each function. KeyMacro is more than just a PHP editor. It also provides many other useful functions, such as FTP client, Chrome
