The first big one is Live Edit. When first introduced, it was quite a success. This functionality is useful in post-processing RAWs and other data. There are numerous filters and other processes that can be applied live to a RAW image at a distance, so to speak. Some months ago, Adobe started to add ND filters. Now ND filters are implemented and they are fully customizable, as well as varying with the current light conditions. At the same time, you may have already noticed that some features and menus have slightly changed their appearance. Adobe takes everything slow, so even though this is a rather minor change, I know that Adobe had time to implement it. The pictures above were taken with the new interface; below is one taken with the previous one. Note the difference between the icon shapes (Finder window's toolbar icons for for example) as well. You can also see that the "new" appearance is better suited to icons on the Mac, which is somewhat evident. The tabs are just a random example of what I mean, the actual appearance of the tabs are identical. They just look different because icons look better in the Mac OS. Overall, this is a minor complaint, so I can just say "do not worry". Sometimes you can't save the same RAW file from one moment to another. I did a simple experiment here. I opened a RAW file, then opened it again and tried to save it. I did save but the function was not working as it should. I then opened the RAW file in Photoshop, closed it, opened it again, saw that it was the same RAW file and tried to save it, but it did not work. I then copied the existing RAW file and pasted it into a new document. I then opened that document in Photoshop, closed it and tried to save it as RAW and it worked. I even tried to open it in Photoshop and close it, but it always saved the file as JPEG.

This new feature is something that the designers have been waiting for. They can create hundreds of collections and switch between them easily. These collections can be static or dynamic. The dynamic collections will help the designers to organize their work and there is no need of starting from scratch every time. But now lets have a look into the static collections. The static collections make it extremely easy to design the site catalogues. These collections are what the designers need to start the great design creation. The dynamic collections is better for high volume work. But a simple combination of both the collections will be great for the designers. This concept is all new in the Photoshop 2020 version. The designers can easily organize their images or the documents in folders or projects. To avoid manual work, they can build the structure of the images in the object library, and then have the paths or the text-objects in the layered Photoshop file. These text objects are the building blocks of the projects. In the current version we either had to drag and drop them manually or the import them from PDF. In Photoshop 2020 version we can add or edit specific text-objects and also tell what should be their location or order in the layers. This is another great feature that the designers will love to have in their hands. This help them to design the various elements on the websites like logo, icon or any graphics in an efficient way. They simply drag and drop it on the above objects and have it ready. It is easy to save as too. The other features changes are include to make it work seamlessly.
