I'd rather see circles of different sizes. If Sony wanted to illustrate that it cares about things - the size of the circles, and the blue color - it could have used circles of different sizes, not only blue dots of the same size. Simon Cowe, a member of our community - even with limited design skills - has helped the community a lot. But the goal is for the community to be even better and help a growing company make the transition smoothly. If Sony has followed the blue dot strategy to the end, I am afraid that a certain hardship awaits. *I believe that Sony needs to learn from Apple and find new ways to connect its products. It's time to take new ways of community building to play. There are a lot of old-fashioned companies in the world who won't listen to a creative person, especially a designer or developer who doesn't have relevant skills.*

I should be working but I can't stop playing around with the new Adobe Photoshop features introduced in Photoshop CC 2015. Believe it or not, this is my sixth time reviewing software in this long-running series and it's my favorite yet. Photoshop's new features are not only the best in the program, but the best in any software I've ever reviewed for PCMag. For photography, developers have better alternatives, and features like automatic panorama stitching and RAW editing have been introduced in the past year. On the video editing side, Sony Vegas Pro 12 and Adobe Premiere Pro are on the cutting edge of the software marketplace. And, finally, the Mac version of Photoshop is a much better alternative for Photoshop veterans, offering features like automatic optimization and creative workflows that are extremely handy for those of us who have had to work within the constraints of software that just doesn't do these things as well.

During my trials, I found the product to be pretty intuitive and easy to understand. You can save your artboards, finish your images, and easily layer all the photos you want. The brushes and tools are pretty amazing and they allow you to create some pretty amazing effects. There's also extensive help files that you can take advantage of. Adobe Photoshop is more complex than your average products, but once you're in the swing of it, it's a breeze. Performing all the tasks associated with creating images or projects can be a time consuming process. However, a lot of the real time-consuming --and costly-- tasks that are required to make sure an image is at an acceptable standard once it is complete are taken care of. The elimination of the 3D features in the product will make it a lot easier to create, manage, and create projects. For the price, you won't find a better product. A new product series will also be introduced by Adobe. This series will be focused on delivering content on:

- Feature-based content
- White papers
- Reference content

With the arrival of the next major release, Adobe's flagship software is getting a new look and many new features for 2018. In particular, the change to the UI is the most apparent feature, but there are several other changes being introduced. An update to the UI will aid novice users as well as professionals. A new Photoshop CC product profile has been created. In this new offering, Appearances is a more fully featured version of PS CC's Appearance panel with scene management and a single panel layout. Mood UI is the history panel, which can be turned off and on for all of the panels, so users can still access the panel with a single click.

“The rise of video use continues to accelerate, and it’s clear that visual learning is taking place, on desktops and mobile devices, more than ever before,” said Susan Wojcicki, chief executive, CEO, and president, of YouTube. “Adobe has long been a pioneer in the world of video, and is working with us to help people learn quickly and later become creators of their own amazing content. We’re thrilled to help Adobe continue to bring the same creativity and inspiration to learning on any device.” In addition, at MAX, Adobe released a preview of LiveShare for Review (beta). LiveShare for Review enables collaboration without leaving Photoshop, with in-browser editing and the use of a 1080p mobile camera. Learners can collaborate on content in real time with colleagues or peers from the same organization and anywhere on the web. LiveShare for Review can be accessed from any device with a browser, enabling students anywhere to access high-quality content without the need for a laptop or desktop computer. Adobe also unveiled at MAX new Photoshop features powered by Adobe Sensei, a new class of machine-learning model that enables Photoshop to understand common vision problems, such as recognizing and dealing with overlapping objects, and automatically fixing problems such as skewed dimensions. Adobe has been reinventing the way people experience Photoshop for more than 30 years. Photoshop is used by creatives working in nearly every major market, including fashion, architecture, food and marketing, to name a few. In this release, new features include:
